STATE OF IOWA
DEPARTMENT OF PUBLIC SAFETY

IN RE:

TF WIRELESS PRODUCTS, LLC.

_____/

SECOND AMENDED PETITION FOR DECLARATORY ORDER

Pursuant to Iowa Code ("Iowa") § 17A.9 and Iowa Administrative Code ("I.A.C.") Rule 661-10.101-112, TF Wireless Products, LLC ("TF"), files this amended petition to the Department of Public Safety ("the Department") requesting a declaratory order regarding the applicability of Code §§ 100.1, *et seq.*, to TF in connection with the business endeavor described more fully below.

Questions Posed

- Whether TF is required to obtain a license, permit, or certification under any statute under the jurisdiction of the Department or the State Fire Marshal in connection with the business endeavor described below.

- Whether anyone acting on TF's behalf is required to obtain a license, permit, or certification under any statute under the jurisdiction of the Department or the State Fire Marshal in connection with the business endeavor described below.

Identity of the Petitioner

1. TF is a Delaware limited liability company that has its principal place of business at 9700 Northwest 112th Avenue, Miami, Florida 33178. For the purposes of this [petition/request], TF's telephone and facsimile numbers are those of its undersigned attorneys. As is established by the facts described below, TF will be substantially and directly affected by the Board's determination in this proceeding.

Relevant Facts

2. TF plans to begin selling a product in the State of Iowa that consists of a motion sensor, controller, and battery ("the Basic Product"). The Basic Product is designed to send either an SMS message or place up to eight phone calls when the sensor is triggered, using a wireless module built into the Basic Product.

3. While not sold as part of the Basic Product, motion or door sensors, additional motion sensors, and remote key fobs, together with a pairing card to pair these additional elements with the controller, will be available for sale as an accessories ("Accessory"). (The Basic Product and Accessory will hereinafter jointly be referred to as "the Product").

4. The Basic Product is equipped with an audible sound intended only for the convenience of the Purchaser's interaction with the controller but will not emit a sound intended to scare an intruder or notify persons occupying the premises when a motion detector or magnetic door is activated. Instead, the sole function of the Basic Product is to send a SMS message or phone call to those telephone numbers programmed into the Product by the Purchaser when a motion detector or magnetic door is activated. No oral message will be transmitted. If the Product is programmed to make a phone call, the person answering the call will hear only a buzzing noise followed immediately by termination of the call.

5. The Basic Product cannot be programmed to text or call 911. The Basic Product is not intended to transmit a message or any other signal to a central station that supervises and monitors such calls and messages on an on-going basis or to emergency response agencies. The instructions included with the Product, as well as the user guide, will instruct Purchasers that they must not program such numbers into the Product.

6. The Purchaser will purchase the Product from a retail establishment. The Purchasers themselves will install, activate, and program the Basic Product and install and connect the Accessory. The Purchaser will determine where to place the Product and what Accessories to purchase.

7. Instructions regarding installation, activation, and programming instructions, as well as a user guide, will be provided with the Product packaging. The user guide will also be available online. TF will also maintain a customer service call-in center, which will be available to answer customer questions regarding installation, activation, programming, or operation of the Basic Product and Accessory, but will not provide any advice, instruction, or other information regarding the location, arrangement, layout, or configuration of the Basic Product or any Accessory. No one associated with TF will be physically involved in the installation, restoration, inspection, testing, repair, or replacement of the Product or any component of the Product nor will anyone associated with TF directly supervise any person performing any of those tasks. Moreover, no one associated with TF will have the ability to wirelessly connect to an installed Product in order to run diagnostics, perform maintenance or testing, or make any repairs.

8. The Purchaser will purchase airtime cards, which will be sold in denominations of either 30 days or 365 days, and will add the airtime cards to the Basic Product to connect to the cellular system of a wireless carrier. Like the Basic Product and Accessories, the Purchaser will buy additional airtime cards at third party retail locations. It may also be possible for the Purchaser to purchase additional airtime via internet from TF or one of its affiliates. It is through the wireless connection that text message and calls are transmitted.

9. Neither TF nor anyone acting on TF's behalf holds a current professional mechanical or electrical engineering registration in the State of Iowa.

10. TF is not a party to any pending proceeding involving the issues raised herein. Moreover, to TF's knowledge the issues raised have not previously been decided by the Department of State Fire Marshal and are not currently under investigation.

Relevant Statutes and Rules

11. Iowa § 100C.1 includes the following definitions:

"Alarm system" means a system or portion of a combination system that consists of components and circuits arranged to monitor and annunciate the status of a fire alarm, security alarm, or nurse call or supervisory signal-initiating devises and to initiate the appropriate response to those signals . . . .

"Alarm system contractor" means a person engaging in or representing that the person is engaging in the business of layout, installation, repair, alteration, addition, maintenance, or maintenance inspection of alarm systems in this state.

"Alarm system installer" means a person engaged in the layout, installation, repair, alteration, addition, or maintenance of alarm systems as an employee of an alarm system contractor, or as an employee of any employer other than an alarm system contractor in a building or facility owned or occupied by such employer.

12. I.A.C. Rule 661-277.2 includes the following additional definitions:

"Alarm system component installer" means an employee of an alarm system contractor who is engaged in a portion of alarm system installation limited to mounting alarm system raceways, boxes or system devices, and pulling of system cable.

"Alarm system installer assistant" means a person who is engaged in the layout, installation, repair, alteration, addition, or maintenance of alarm systems under the direct supervision of an alarm system installer.

"Alarm system maintenance inspection installer" means an employee of an alarm system contractor who is engaged in maintenance inspection of alarm systems.

"Installation" means hanging electrical conduits, raceways or boxes; mounting system devices; pulling cable; activating system-initiating devices and system control units or verifying system operations to meet specifications; and performing system acceptance testing.

"Maintenance inspection" means periodic inspection and certification completed by an alarm system contractor or installer.

"Security alarm system" means a system or portion of a combination system that consists of components and circuits arranged to monitor and annunciate the status of a security alarm or supervisory signal-initiating devices and to initiate the appropriate response to those signals, installed in a building or facility to detect unauthorized entry into a building or portion of a building and to notify security personnel or building occupants or both.

13. Iowa § 100C.2.2 and I.A.C. Rule 661-277.1(1)*a* prohibit a person from acting as either an alarm system contractor or an alarm system installer without first obtaining an alarm system contractor's certificate from the Department.

14. The term "maintenance" is not defined in either Iowa § 100C.1 or I.A.C. Rule 661-277.2. However, both the 2007 edition of the National Fire Code (NFPA 72) § 3.3.150 and the 2013 edition of the National Fire and Burglar Alarm Code (NFPA 72A) § 3.3.100 define "maintenance" a "[w]ork, including, but not limited to, repair, replacement, and service, performed to ensure that equipment operates properly."

15. TF is aware of no other statutes or rules of Iowa relating to licensure, permitting, or certification that would be pertinent to the facts describe above, but requests clarification regarding any other relevant statutes or rules that fall under the jurisdiction of the Department or State Fire Marshal that would require licensure, permitting, or certification by TF or anyone acting on its behalf.

Analysis

16. TF contends that neither it nor any of its employees will be required to be certified by with or obtain certification from the Board.

17. TF will not install, alter, repair, inspect, or replace any alarm systems in the State of Iowa. Moreover, neither TF nor anyone acting on TF's behalf will perform any work relating to the layout or configuration of the Basic Product and any Accessories, the maintenance of the Product, or any other aspect of the Product's performance.

BASED ON THE FOREGOING, TF requests that the Department issue a declaratory statement that neither TF nor anyone acting on TF's behalf will be required to obtain certification or any other license or permit from the Department or State Fire Marshal in connection with the business endeavor described herein.

Respectfully submitted this 13th day of June, 2014,

Re: TF Wireless Products Petition for Declaratory Statement

Dear Ms. Ryan:

Thank you for the opportunity to provide supplemental information relating to the Petition for Declaratory Statement submitted on behalf of TF Wireless Products, LLC. During the public hearing held on Tuesday, June 3, 2014, there appeared to be some confusion regarding statements made in the Amended Petition. In order to provide clarification, we are submitting a Second Amended Petition for Declaratory Statement for consideration by the Department.

One of the attendees at the June 3rd public hearing noted that products similar to the TF Wireless device are currently on sale at retail stores in Iowa. Following up on that comment, we researched similar devices that are currently available through three "big box" retail stores – Lowe's, Home Depot, and Walmart – all of which have locations in Iowa. A summary description of the various devices is attached hereto as Exhibit A. I am also attaching photos of each of the devices, including TF's HomeAlert, as Exhibit B.

We noted that, in some instances, the store's website indicated that a particular device could not be shipped to certain states. However, Iowa was not identified as a prohibited state for any of the devices.

We also consulted the Iowa Department of Public Safety's website for a list of the currently licensed alarm system contractors and installers in Iowa. Neither the three retail stores that sell the similar devices nor the companies that produce the devices are identified as licensed entities.

TF's position, as stated in its petition, neither it nor any of the producers of the devices currently being sold in Iowa are engaged in alarm system contracting or installation and, as a consequence, are not required to obtain a license from the Department. However, as was suggested by the speaker during the public hearing, if the Department were to determine that TF Wireless must obtain an alarm system contractor license before offering its device for sale in Iowa, the producers of each of the devices already being sold in Iowa must also be required to obtain licenses.

Sincerely,

CARLTON FIELDS JORDEN BURT, P.A.

Martha Harrell Chumbler

EXHIBIT A

SIMILAR DEVICES CURRENTLY BEING SOLD IN IOWA

Lowe's

Iris (a Lowe's brand)

The Iris "smart home" product line includes a range of products that provide alerts and/or alarms for home intrusion, fire, or other dangerous conditions, as well as the off-site control of thermostats and other home systems. Iris devices are intended to be installed by the consumer and, depending on the particular product purchased, can be programmed to provide alerts via email, text, or voice message to as many as 20 contacts. This offsite alert feature is provided through broadband internet service, for a monthly fee of $9.99. In addition, backup cellular service is available for $4.99 a month or continuous cellular connection for $9.99 per month.

Lowe's does not offer installation service in connection with Iris products. However, the product website indicates that some features (e.g. smart thermostat and certain switches) must be hardwired and advises that a licensed electrician may be needed.

GE Choice Alert

The GE Choice Alert product line provides on-site alarms and silent alerts for a variety of conditions, including intrusions, flooding/water issues, and the presence of fire or smoke. However, unlike Home Alert and the Iris line, Choice Alert does not include an off-site notification component.

Home Depot

Tattletale Wireless Alarm System

The Tattletale alarm system product line will allow up to 6 contacts to be notified, via text or email, if a motion, smoke, or other detector is activated in the home. While the initial 30 days of notification service is advertised as free, I found no information indicating the price thereafter. The product description touts its capability to contract emergency responders, but the on-line instruction manual includes the repeated statement that, in order to enjoy this feature, the purchaser must subscribe to a professional monitoring service.

IDEAL Security Wireless Home Alarm System

Unlike Home Alert, the IDEAL product line uses telephone land lines are the means of providing off-site alerts. The device can be programmed to initiate calls to as many as 5 telephone numbers. There is no monthly fee, other than the costs associated with the telephone service.

SkyLink Wireless System Alarm

The SkyLink system also uses land lines to provide off-site alerts. The device can be programmed to make up to 9 calls and can be added to an existing alarm system to replace

third party monitoring service. There is no monthly fee other than the costs associated with the telephone service.

Mace Wireless Home Security System

The Mace System also utilizes telephone land lines and can be programmed to call up to 5 telephone numbers. There is no monthly fee, other than the costs associated with the telephone service.

SecurityMan D.I.Y. Wireless Smart Home Alarm System

The SecurityMan product, like IDEAL, can be programmed to call up to 5 telephone numbers, but is compatible with analog phones only. There is no monthly fee other than the costs associated with the telephone service.

Walmart

OPLINK Security

OPLINK systems are cloud based, providing alert notifications through smart phone apps. The basic system includes no monthly fee, but premium service – which can include remote video and other features, as well as notification to additional smart phones – do involve monthly fees. In addition, optional cellular backup can be purchased through Verizon.

Walmart also sells SkyLink, Mace, and SecurityMan products.

Pricing Policy

About Our Prices

We strive to provide you with the lowest prices possible on Walmart.com as well as in our stores. However, sometimes a price online does not match the price in a store. Walmart.com's prices may be either higher or lower than local store prices. Prices may also vary between stores. Our local stores do not honor Walmart.com pricing or competitor advertisements from outside of a store's local trade territory.

TF WIRELESS HOME ALERT

TF WIRELESS HOME ALERT SYSTEM

Device Info:

- The Home Alert System is a standalone (non-monitored) device that has a built-in wireless module that can send an SMS message or place a phone call to up to 8 pre-assigned numbers when a sensor is triggered. This product is not intended to be used as an alarm as it does not have a siren as alarms do. It is intended to alert the customer on their phone when a remote sensor is triggered.
- We will sell a "Kit" that includes a controller, one motion sensor, a wall power supply, and two 9V batteries (one for the motion sensor and one for the controller that's a backup battery). All of this will come from Reliance in a plain white box.
- There are three separate accessories being sourced from Reliance. There will be sold individually by Walmart for customers to add to their basic kit if desired: Motion Sensor, Magnetic Door Sensor, Remote Key Fob
- Controller and accessories require "pairing". The basic kit will come pre-paired at the factory. Customer will have to do the pairing for any other additional accessories purchased separately. A "Pairing card" similar to an activation card will be included with the accessories.
